

Project Title: Earthquake Vulnerable Building Detection & Area-Based Risk Analysis System for Bangladesh (SeismoSafe)

Entities:

- 1.User
- 2.Owner
- 3.Inspector
- 4.Residence
- 5.Building
- 6.Seismic Zone
- 7.Risk Score

Key Features:

#	Feature	Description
1	Building Registration	A module that allows users (Owners) to input and save building details into the system, establishing a unique record for each property.

#	Feature	Description
2	Complain Management	Enables users(Residence or Owner) to file complaints regarding building issues. This includes the ability to upload a photo of the problem and provide a detailed text description.
3	Building Information Display	A dedicated view where users can see all relevant information, specifications, and history related to a specific building.
4	Role-Based Dashboard	A personalized landing page that displays different data and controls based on the user's role (e.g., Resident, Owner or Inspector).
5	AI Chatbot	An integrated chat box powered by AI to provide instant support, answer frequently asked questions, and guide users through the platform.
6	Seismic Zone Mapping	An interactive map feature

#	Feature	Description
		that highlights different seismic risk areas using shaded overlays to inform users about local safety zones.
7	Admin Control Site	A backend management portal for administrators to oversee system operations, manage users,give approvals and moderate content across the site.
