

Project Title: Earthquake Vulnerable Building Detection & Risk Analysis System for Bangladesh (SeismoSafe)

Entities:

- 1.Admin**
- 2.Owner**
- 3.Inspector**
- 4.Residence**
- 5.Building**
- 6.Risk Score**
- 7.Complain**
- 8.Emergency Facility**
- 9.To_Let**
- 10.Rental_Request**
- 11.Payment**

Key Features:

#	Feature	Description
1.	Building Registry and own Building Info Display	Owners can register buildings by filling out a

#	Feature	Description
		registration form. Building details such as building name, address, total floors, construction year, material type, and emergency facilities are stored in the database. Owner can also see his own building details.
2.	Complain Management	Tenants can submit complains about building problems such as cracks or safety issues. Complain are stored in the database and can be assigned to inspectors by the admin. Complaint status can be updated as Pending, working or Solved by the Inspector.
3.	Measure Vulnerability using Risk score	A dedicated view where users can see relevant information related to all the buildings with risk score to understand the vulnerability of the buildings. Users can also search for a specific building.
4.	Admin Control Panel	The Admin has full control

#	Feature	Description
		over the system. Admin can add and delete buildings, monitor complaints, assign inspectors, and monitor inspector feedbacks,also can see how many complain at what status and total building and complain. The Admin panel acts as the central management system for all activities.
5.	Inspector Control Panel	The inspector can see his assigned works on his panel. He can update the progress of his investigation on a complain and give feedback on it using text and photo.
6.	Profile Management	Owner and tenant can update their information and manage their respective profile.
7.	To-let Management System	The owner can give a toilet post on the tenant's side,can view the tenants request and accept it.Tenant can request for rent and also can pay the

#	Feature	Description
		rental fee.

8.	Payment Gateway	Integrated SSL commerce for doing rental payments by tenants or collecting rents by the owner.
----	------------------------	--

9.	Role-Based Access Control	Each user role (Admin, Owner, Tenant, Inspector) has a separate dashboard. After login, users are redirected to their specific panel based on their role.
